

CATALOGUE OF AESTHETIC
MEDICAL DEVICES

EXPERIENCE WELLNESS WITH LEGOLASER

Innovation and evolution applied
to health, wellness, and beauty.

UNIQUE TECHNOLOGICAL
INNOVATION, COUPLED
WITH EXCELLENT CUSTOMER
ORIENTATION

We are a fresh minded and innovative company founded in 2014 as a result of the ongoing search for new solutions to the dynamic beauty and healthcare market needs.

Legolaser is also committed to the initial and continuous training of all its clients as well as an excellent technical and medical support.

Thanks to our fresh business concept, Legolaser is initially established in Spain and later expands its brand globally. Nowadays, Legolaser exports its aesthetic medical devices over 25 markets under distributorship format.

Likewise, we plan to continue growing worldwide in the coming years and consolidate our presence in the 5 continents.

EXCELSIOR

OPT L E D TECHNOLOGY 3.0

LIVE THE EXPERIENCE

The most revolutionary and innovative technology
to date for permanent hair removal

OPT LED TECHNOLOGY 3.0

OPT LED technology for hair removal is based on LED chips (made in USA), which emit high-power LED light source through an optimized wavelength spectrum from 755 nm to 880 nm. LED light is highly effective targeting the melanin of the hair follicle for a permanent hair removal.

01. Light source: **OPT LED chips**
02. LED Total Power: **2. 400 w**
03. Wavelength spectrum:
755 nm ~ 880 nm
04. Working mode:
SHR, static, continuous, and expert.
05. Cooling system:
ICE TEC + Water cooling

-  High power for an excellent clinic result
-  Smart software system
-  Minimum divergence of LED light

ERGONOMIC AND HIGHLY RESISTANT HANDLE

UP TO 100 MILLION SHOTS

BIG SPOT SIZE

The new Excelsior fits a large spot 17 x 22mm (3.74 cm²) that reduces treatment times.

HIGH SHOOTING FREQUENCY

Thanks to Excelsior frequency (1-10 Hz) it makes the device one of the fastest light systems used in hair removal.

DURABILITY

The new Excelsior is capable to perform out up to 100 million shots.

COLD PROTECTION

Thanks to the broad spectrum of light, it can be applied to all photo types, and all types of hair even in residuals.

ERIDE PRO

STATE OF THE ART QUAD WAVELENGTH DIODE LASER

755nm - 810nm - 940nm - 1064nm

Designed to maximize your permanent hair removal results.

Quad-wavelength diode laser technology designed for enhanced comfort and efficiency

755nm - 810nm - 940nm - 1064nm

13 x22 mm

**OPTIMIZED SPOT FOR
GREATER TREATMENT
RELIABILITY.**

755 nm

ALEXANDRITE WAVELENGTH

Characterized by the strong absorption by the melanin, it is the ideal wavelength for removing fine and light hair, making it perfect for delicate areas such as the brows and upper lip.

810 nm

THE GOLDEN STANDARD

Optimal melanin absorption and relatively deep penetration at this wavelength provide a balance between safety and efficacy.

940 nm

WAVELENGTH FOR MEDIUM SKIN TONES

The 940 nm wavelength is designed for medium skin tones. Its moderate melanin absorption reduces the risk of skin irritation while ensuring deeper penetration to treat darker hair with slightly lighter roots. This balance makes it ideal for achieving safe and effective results in challenging cases.

1064 nm

ND: YAG WAVELENGTH

Characterized by low melanin absorption, the 1064 nm wavelength is ideal for darker skin tones, reducing the risk of hyperpigmentation while offering a painless, effective, and safe hair removal experience.

Next-generation handpiece for an exceptional experience

High-power diode laser generator (3.000 w), capable of removing the finest and residual hairs.

REAR TOUCHSCREEN

Its integrated touchscreen allows for easier adjustment of fluence and frequency.

ERGONOMIC DESIGN

Exclusively designed by Legolaser to fit perfectly in your hand, ensuring comfortable handling and an exceptional user experience.

HIGH-PRECISION APPLICATOR FOR DELICATE AREAS

Designed to precisely treat sensitive and hard-to-reach areas, such as the upper lip, fingers, or intimate zones, this applicator offers high precision and effectiveness in every treatment.

Cooling 4D Technology and High-Performance Connector

01.

COOLING 4D SYSTEM

02.

HIGH-QUALITY CONNECTOR

03.

ADVANCED ANDROID SOFTWARE TECHNOLOGY

04.

FOUR WORKING MODES FOR CUSTOMIZED RESULTS

- STATIC
- SWEEPING
- ADVANCED
- SMALL AREAS

ERIDE

THREE WAVELENGTHS TECHNOLOGY

755nm + 808nm + 1064nm

Highest efficiency for all skin types
during the whole year

THREE-WAVELENGTHS INTEGRATED IN ONE HANDLE

12 x17 mm

**LARGE SPOT SIZE FOR
GREATER RELIABILITY
OF THE TREATMENT**

755nm

Alexandrite wavelength. Especially effective for light hairs, such as eyebrows, or upper lips among others. Offers an effective energy absorption by the melanin chromophore, making it ideal for the widest range of hair types and colours.

808nm

Golden standard wavelength for standard hair types. Offers deep penetration of the hair follicle with high average power.

1064nm

Nd:Yag wavelength. Specifically effective for dark and high skin types. It is characterized by the lower melanin absorption, making it a focused solution for darker skin types. Painless hair removal.

SMALL AREAS ADAPTER

REAL RESULTS

LATEST THREE-WAVELENGTHS TECHNOLOGY

755nm + 808nm + 1064nm

One of the most innovative hair removal systems, three technologies integrated in one handle

The three wavelength bars assembled emit three wavelengths of light aiming at targets with different structure within the hair follicles. Suitable for all skin types, and hair colours during the whole year.

01. Laser type: **DIODO**

02. Total Device Power:
3.000 w

03. Wavelength:
755 nm + 808 nm + 1064 nm

04. Cooling system:
Up to -5°

Our diode laser offers the latest technology in connectors, which **provides security and stability.**

The new system allows the connection and disconnection of the handle to the equipment in a simple and agile way.

MUSA **CO2**

**ADVANCED FRACTIONAL CO2 ULTRA
PULSED LASER TECHNOLOGY**

For aesthetic, surgical and intimate use.

Skin applications

- Facial rejuvenation
- Skin resurfacing
- Wrinkles
- Coarse pores
- Acne, surgical, and traumatic scars
- Stretch marks
- Warts
- Vascular granuloma
- Seborrheic keratosis
- Senile lentigines
- Fatty granules
- Xanthomas of eyelids
- Melanocytic nevus
- Epidermal hyperplasia

ADVANCED FRACTIONAL CO2 ULTRA PULSED LASER TECHNOLOGY

The new Musa CO2 device incorporates the most advanced Fractional CO2 Ultra Pulsed laser technology specially designed for treatments that require ablation, incision, excision, and thermal coagulation of soft tissues in order to **improve skin texture and imperfections.**

01. Laser type: **Fractional CO2 Ultra Pulsed Laser**

02. Wavelength: **10600 nm**

03. Laser power: **40 w**

04. Treatment working modes:
Fractional, Continuous, Intimate 90°, Intimate 360°

05. Cooling system:
Air cooling system

Intimate applications

- Vulva rejuvenation.
- Vaginal lips aesthetic.
- Vaginal tightening / elasticity increasing.
- Insufficient vaginal secretion.
- Vaginal dryness.
- Urinary incontinence.

FLEXIBILITY AND PRECISION

FOR MEDICAL, AESTHETIC AND GYNAECOLOGICAL USE

CLINICALLY TESTED RESULTS

DIFFERENT APPLICATORS

Enable an effective treatment of various pathologies depending on the technique required.

ARTICULATED ARM THAT PROVIDES MAXIMUM PRECISION

SCAN PATTERNS

A wide variety of shot patterns that allow it to adapt to the characteristics of each irregularity, adjusting the shot to the treatment area.

It offers the possibility to operate in three different scanning modes: Sequence / Maximum distance / Random.

Maximum versatility
Reduced downtime

ULTRA PULSED TECHNOLOGY

Thanks to its RF-excited Ultra Pulsed technology, Musa Co2 delivers more precise results, faster recovery times, reduced side effects, superior treatment quality, and optimized treatment duration, ultimately enhancing patient satisfaction.

INFINITY PRO Q-SWITCHED

ND-YAG 1064nm / 532 nm

Superior Quality ND Yag Laser. The favourite laser for the most demanding professionals.

ND-YAG LASER TECHNOLOGY 1064nm / 532 nm

The new Infinity Pro has been designed to provide **accurate solutions for every pigmentation's needs**. The Q-Switched laser is powered by dual-wavelength technology (532nm – 1064nm), which provides high energy in a concise period of time (nanoseconds).

- | | |
|-----|---|
| 01. | Laser type:
Nd Yag Q-Switched |
| 02. | Wavelength:
1064 nm / 532 nm |
| 03. | Device power: 3.500 w |
| 04. | Laser Energy: 2600 mJ |
| 05. | Protection System:
Auto-Reset |

APPLICATIONS:

Pigmented lesions, lentigos, melasma, brown spots, nevus...

Tattoo removal, dark and light colours.

Carbon peeling, facial rejuvenation, pore sealing, tightening...

Onychomycosis and bleaching.

Quasi long pulse:

400ns-500ns pulse width @1064nm, which enables treatment without damaging surrounding tissues on quasi long.

Stable power supply:

Making it possible to optimise energy delivery even during long time treatments.

HIGH POWER AND DURABILITY LASER LAMP UP TO 20 MILLION SHOTS

AUTOMATIC SPOT SIZE:

Ensures focusing on different target sizes according to the treatment needs.

LASER AUTOCALIBRATION SYSTEM:

It assures the highest beam quality and equal energy delivery in every treatment.

○ SPOT SIZE

1064 nm – 532 nm
(Ø 2, 3, 4, 5, 6, 7, 8, 9, 10) mm

○ ARTICULATED ARM

7 mirrors with multiapplication

EFFECTIVE RESULTS

Its application on tissues produces a photoacoustic effect, which fragments the target pigment in the most effective way in order to be properly eliminated by the lymphatic system.

DIOVAS **980nm**

FIBER DIODE LASER

Latest technological innovation for
vascular lesions care.

FIBER DIODE LASER TECHNOLOGY

980nm

Diovas technology is a 980nm transdermal diode laser, with an optical fiber transmission system.

This cutting-edge technology has been designed to treat vascular lesions up to 4 mm in diameter. Its advanced design, such as its convenient size, make it a great option for every clinic.

01. Laser type: **Fiber Diode**

02. Wavelength: **980 nm**

03. Power: **Laser Source 100 w
/ Device 30 w**

04. Fiber diode life lasting:
6.400 hours

05. Working Mode:
Continuous / Pulse

Excellent transdermal penetration

- It reduces side effects like erythema, or pigmentations disorders.
- No allergic reactions to be produced.
- No needles are needed.

TRANSDERMAL DIODE, WITH OPTICAL FIBER TRANSMISSION SYSTEM.

Thanks to the low absorption by melanin of 980nm wavelength, the Diovas treatment **can be performed in every skin type and during the whole year**. In addition, patients can return to normal activity immediately after treatment.

1.

PULSE MODE:

- Telangectasias
- Varicose veins
- Cuperosis
- Rosacea
- Ruby spots
- Hemangioma
- Venous lakes.

2.

CONTINUOUS MODE:

- Filiform warts
- Condylomas
- Acrochordons

VISIBLE RESULTS

○ SPOT SIZE
1,4 - 1,9 – 2,4 mm

TECHNOLOGICAL SOLUTIONS THAT GUARANTEE
SAFETY, INNOVATION AND RESULTS IN SERVICE
OF HEALTH AND WELLNESS
